Abstract: From the Oracle period, the character “Shui” (water) has been created as a single pictograph and has been frequently used. In the long history of Chinese development, the connotation of “Shui” has been constantly enriched, with some lexical items appearing and disappearing, and some new lexical meanings being frequently used in contemporary communication and gradually being stereotyped. Based on the corpus of Center for Chinese Linguistics (CCL) of Peking University, this paper takes the meaning of “Shui” as the research object, comprehensively summarizing the meanings of water in each period at the diachronic linguistic level and analyzing the relationship of the terms of the meaning of “Shui” at the synchrony linguistic level. The research shows that the meanings of “Shui” in earlier periods were primarily extended from its basic sense, with straightforward derivations. In the Ming and Qing Dynasties and modern times, new meanings often arose through metaphor and metonymy. These metaphorical meanings became more intricate and less directly linked to the original, enhancing expressive vividness and reflecting a strong connection to life while maintaining simplicity.

Keywords: Water, Lexical evolution, Semantics

1. Introduction

“Shui” (water) is one of the core words of Chinese. Among the pieces of research on “Shui”, most of the papers compare the cognitive differences between “Shui” (water) in Chinese and “water” in a foreign language from the perspective of metaphorical cognition from the perspectives of general linguistics and cognitive linguistics. Zhang Liuxi used the conceptual metaphor theory to make a comparative study of the metaphor of “water” in Chinese and English, and analyzed the reasons for the differences in metaphorical cognition[1]. Lu Lingyun did a study of Chinese special language lexicon, sorting out simple words and compounds composed of “Shui” and words, idioms and idiomatic expressions of “Shui”, and analyzed the word formation and semantics of the “Shui” word group[2]; Zhang Fang carried out a systematic study of the semantic field of “Shui”, according to The idea of “semantic field-sub-semantic field-word” comprehensively sorted out the words in the “Shui” semantic field and classified them according to their semantics[3]. The method of comparing word meanings was used to systematically compare the words in each semantic category. Summarize the rules of semantic evolution. In addition, there are two analytical studies analyzed the evolution of the word meaning of “Shui” in the structure of “Shui×” “×Shui” and its occurrence mechanism[3-5].

Generally speaking, there have been abundant studies on the Chinese basic word “*Shui*”, but most of them are cognitive linguistics research, and less attention has been paid to the meaning of “*Shui*” itself. This article takes the meaning of the basic Chinese word “*Shui*” as the research object, and studies the evolution of the meaning and the clustering of meanings of “*Shui*”. With the help of the corpus of Center for Chinese Linguistics (CCL) of Peking University (<http://ccl.pku.edu.cn/>) and Modern Chinese Dictionary (seventh edition), and referring to the Han Dictionary website and other online resources, we try to comprehensively collect and organize the meaning of “*Shui*”, and sort out the development and evolution of it, and finally summarize the relationship between various items of the meaning of “*Shui*” to deeply understand and grasp the connotation of this core word. This study is helpful to comprehensively understand the semantic system of “*Shui*” and its semantic development, which is of great significance for studying the semantic evolution of Chinese words and predicting the future development direction of Chinese words. In addition, it has positive significance for the compilation and compilation of dictionaries, which is conducive to better recording and understanding the historical evolution and current situation of Chinese vocabulary, and providing more accurate and comprehensive vocabulary resources for Chinese learners.

2. The Evolution of the Word “*Shui*”

Water, as an important element in nature and an indispensable resource in people's daily lives, has appeared in oracle bone inscriptions. The shape of its oracle bone characters is as follows , which is a single pictographic character with a water vein in the middle and flowing water on both sides. The pictographic character indicates that the original meaning of “*Shui*” includes the collective name for all kinds of water flows such as rivers, etc. It can also represent the flow of water. So the original meaning of “*Shui*” is a collective name for various types of water bodies. It can also mean the flow of water, and emphasizes the “flat” and unbiased characteristics of water.

With the development of the times, the basic meaning of “*Shui*” has been defined more scientifically and clearly, and many derived meanings have also been extended based on the basic meaning. The main meanings of “*Shui*” included in Modern Chinese Dictionary (7th edition) are: a. The simplest hydroxide compound, chemical formula H₂O. (5) [Form] The content is empty or untrue of China: Strictly crack down on hiring cyber trolls to slander and smear companies (China Inspur News 2 023-6-2)

The so-called "water courses" refer to those courses with “Shui” content, “Shui” management, and “Shui” assessments. The main manifestations are that the classroom content is boring, the teacher's teaching courseware is not updated, the students gain little, and the students pass the exam and even get high grades. It's easy... (CCTV News 2 019-11-01).

"Tarbots" generally refer to Internet trolls, which refer to hired Internet writers who publish specific information for specific content on the Internet; the information disseminated by "Tarbots" is often biased or untrue. "People" are also hired or faked. "Water Lesson" uses “Shui” to express the empty nature of its content. The meaning of "empty or untrue content" is a new morpheme meaning developed by the word “Shui” in the context of Internet buzzwords.

3. The Relationship between the Various Meanings of “Shui”

The relationship between the various meanings of “Shui” is roughly as shown below. Using the basic meaning of water as a general meaning to refer to specific types of water such as rivers and rainwater creates new meanings through specific reference, and the new meaning is the specific meaning. All

the extended meanings are derived from the association of the basic meaning of “Shui”: the verb meaning "to measure the level with water" is derived from "water, accurate"; if the water is large, it may cause floods, which leads to "flood; flood" "meaning"; "official name" and "water army" are all things related to water, derived from the basic meaning; "swimming; swimming" is an activity on the water, also derived from the basic meaning of “Shui”. The meaning of "aquatic animals and plants" is to use the growth environment of animals and plants to refer to the whole thing, which is a metonymy. The emergence of each meaning of metaphor can be understood with the help of metaphor cognitive theory. The extended meaning of “Shui” is "big water; flood" has the hidden meaning of disaster and misfortune, so “Shui” can be used to refer to the painful life of nuns or prostitutes; “Shui” is flowing, not an entity, and in currency exchange the subsidy is like the "moisture" between the two currencies, so “Shui” is used to refer to this meaning. At the same time, due to the "unreal" semantic characteristics, “Shui” can also refer to products with poor quality; the basic meaning of “Shui” is colorless, odorless, and contains no impurities. It has the meaning of "empty" in terms of derogatory color. Therefore, “Shui” and “Shui” in structures such as "water A new meaning of "real".

4. Conclusion

From the above analysis, “Shui” already had rich meanings when it was first created and used (this article refers to the Pre-Qin period), but most of these meanings are directly derived from the basic meaning, and the derivation relationship is mainly an extension and specifically, the derivation relationship is simple and easy to understand; in the Ming and Qing Dynasties and modern times, new meanings of “Shui” were often generated through metaphor and metonymy. The metaphorical meaning increased, and the connection between the derived new meaning and the original meaning was more tortuous and vaguer. However, the image and simplicity of expression are enhanced, and it reflects a strong sense of life. More working people participate in the language production process, relying on their rich life experience, commonly used basic words are used to vividly express things or phenomena in life, and because of the image and popularity of expression, they have strong dissemination properties and are fixed as new meanings in widespread and frequent use at the social level. Finally, this paper analyzes the relationship between the various meanings of “Shui” in order to systematically and rationally grasp the meaning of “Shui” on the basis of understanding the evolution of the meaning of “Shui”. However, this paper lacks a study of the new meaning of "Shui" in contemporary Chinese, where future studies can focus.
